

Gateway to Industry Schools

Building career pathways

Empowering young people to make informed choices about their future, the Gateway to Industry Schools program builds bridges between school and work. The program includes six industry sectors: manufacturing and engineering; aerospace; food, wine and tourism; building and construction; minerals and energy; and agribusiness.

For students

The program delivers a range of learning experiences with industry-supported activities that will assist school leavers make informed career choices and open pathways to employment. School students will gain valuable industry experience while still at school, providing them with the tools and knowledge to make informed decisions about post-school training, education and employment.

For teachers

Teachers participating in the program will engage in industry-relevant training and professional development. With contemporary industry knowledge teachers can facilitate better connections between the Australian and Queensland curricula and career and training opportunities for their students. The program provides access to current career information to help students choose the relevant pathway to achieve their next step towards a successful career.

For schools

The program builds strong partnerships between schools and industry, allowing participating schools to provide industry-relevant learning opportunities for their students. Industry participation also provides school teachers with the skills to better support students undertaking school-based traineeships or apprenticeships. In addition to school-based VET support, the program offers up-to-date training and career information to teachers and career guidance officers to help their students make informed decisions on their future career and training opportunities.

For industry

The Gateway to Industry Schools program provides industry with the flexibility to develop and implement tailored school engagement approaches and activities. As each project is led by industry organisations, school-based learning and engagement activities are structured to support the development of key industry skills and workforce priorities.

Gateway to Industry Schools

Manufacturing and Engineering

The Manufacturing and Engineering Gateway to Industry Schools Program encourages partnerships between industry, government and community to build Queensland's manufacturing and engineering workforce for the future.

Agribusiness

The Agribusiness Gateway to Industry Schools Program encompasses the vast variety of exciting career pathways and jobs associated with on-farm production and the various stages of distribution, value adding, processing and marketing the product right through the supply chain until it is ultimately purchased by the consumer.

Aerospace

The Aerospace Gateway to Industry Schools Program provides participating school students and their teachers learning opportunities and experiences about the world of aviation and space flight. The program provides information about career pathways and employment in the aerospace industry and its supply chain industries.

Food, Wine and Tourism

The Food, Wine and Tourism Gateway to Industry Schools Program aims to help young people make a successful transition from school into further education and or employment in the food, wine and tourism industries.

Building and Construction

The Building and Construction Gateway to Industry Schools Program is a school-based, industry-supported program specifically designed to engage students with career pathways and opportunities in the construction industry.

Minerals and Energy

The Queensland Minerals and Energy Academy is a partnership between the Queensland Government and the Queensland Resources Council which provides a talent pipeline of work ready employees into the resources sector and other supporting industries in science, technology, engineering and mathematics (STEM).
